About

I am an M.Sc. student in RWTH Aachen University in Electrical Engineering, Information Technology and Computer Engineering Department. My special interests are intelligent systems, robotics, artificial intelligence, machine learning, control theory and signal processing. I have both research and application oriented experiences supported by my educational background and internships.

Education

2020–present **RWTH Aachen University**, *Aachen, Germany*, M.Sc, Electrical Engineering, Information Technology and Computer Engineering
Major: System and Automation

February 2023–present **Fraunhofer FKIE**, *Wachtberg, Germany*, Master's Thesis,
Tracking and Evasion using Co-Training with Context Knowledge
-Multi-Agent Deep Reinforcement Learning
-Image Processing with Convolutional Neural Networks
-Path Planning, Tracking and Evasion

2022 **Chalmers University of Technology**, *Gothenburg, Sweden*, Summer School, Analysis and Modelling Road User Behaviour

2016–2020 **Bilkent University**, *Ankara, Turkey*, B.Sc, Electrical and Electronics Engineering
GPA:3.35/4.00

2011–2016 **Lycée de Galatasaray - Galatasaray High School**, *Istanbul, Turkey*, Science, *GPA:86.20/100.00*

Work Experience

March–August 2022 **Siemens AG**, *Munich, Germany*, Engineering Intern,
Artificial Intelligence on Wire Arc Additive Manufacturing (WAAMAI) Data Analytics Team
-Anomaly Detection using various Machine Learning Algorithms and Frameworks
-Process Monitoring and Automation Software Development
-Edge Computing with NVIDIA Jetson working on Ubuntu
-Closed Loop Controller Optimization

June–September 2019 **Fraunhofer IIS**, *Erlangen, Germany*, Engineering Intern,
LIKE Department–PEMSY Team
-Redesign and optimization of PCB for IoT and Embedded Electronics team affiliated with FAU
-Microcontroller programming

June–July 2018 **TÜBİTAK Space Technologies Research Institute**, *Ankara, Turkey*, Engineering Intern,
Satellite Platform and Payload Electronic Design
-Signal Processing and Microprocessors

Notable Courses

B.Sc and M.Sc

Introduction to Artificial Intelligence, Neural Networks, Data Science, Big Data Analytics, Robotics and Man-Machine-Interaction I and II, Simulation of Robotic Systems Sensors and Environment, Feedback Control Systems, Nonlinear Systems, Robust Feedback Theory, Signals and Systems, Digital Image Processing,, Machine Learning for Speech and Audio Processing, Optimization in Engineering, Estimation and Detection Theory, Modeling of Mechatronic Systems, Laboratory: Audio Processing Using Python, Seminar: Current Concepts and Trends in Robotics and Simulation Science

Projects

2021 **Mobile Robotics in Disaster Scenarios**

Review article about development of mobile robotics in disaster scenarios, submitted to RWTH Aachen University Institute of Man-Machine Interaction (MMI) for the seminar Current Concepts and Trends in Robotics and Simulation Science. Chapters: History of mobile robotics, techniques and systems developed for disaster scenarios, examples of mobile robots in disasters and the future of mobile robotics in disaster scenarios. Access: click here.

2020 **Accompanying Humans and Achieving Designated Tasks with Autonomous Mobile Robots (TAG-A-LONG-BOT)**

Senior year project, teamwork and collaboration of a group of five students in the electrical engineering department, supported by ROKETSAN. Aims to design and implement autonomous mobile land robots to track a designated moving human, avoid nearby obstacles by detecting and dodging them, smoothly move on the terrain via odometer information provided by beacons placed around the implementation zone. Main components are computer vision system, mechanical setup of the robot, control system, object tracking, avoidance simulations and real life testing. For more: TAG-A-LONG-BOT

2018 **Hand Gesture Controlled Remote Car**

Remote car controlled with the gesture of user's hand, communicating via Bluetooth. Consists of two parts, 4WD car and hand, each has a microcontroller: NXP FRDM-KL25Z and Arduino Nano, respectively. Course project for EEE212 Microprocessors.

2017 **Rotating Object Detector**

Mechanism based on BASYS 3 FPGA Board programmed with VHDL that detects objects within a range and alerts the user. Course project for EEE211 Introduction to Digital Design. For demo, link: Rotating Object Detector Demo

Computer Skills

Python, MATLAB, Simulink, Docker, Version Control, Linux, Java, Assembly, VHDL, LaTeX, EAGLE, LTSpice, MS Office

Honors and Awards

2022 **DAAD Scholarship for Completing Studies for Students**, DAAD and RWTH Aachen University

2016—2020 **Scholarship of the Turkish Prime Ministry**

2017 **High Honor Student**, Bilkent University Electrical and Electronics Engineering Department

2016 **Ranked 46th in Nationwide University Entrance Exam (LYS)**, Foreign Languages Exam

Language Skills

English, *Advanced*

French, *Advanced*

German, *Beginner*

Turkish, *Native*

Examination Results

February 2020 **TOEFL iBT**

Reading 28/30 - Listening 22/30 - Speaking 23/30 - Writing 24/30 – 97/120 overall

February 2020 **GRE General Test**

Quantitative 166/170 - Verbal Reasoning 151/170 - Analytical Writing 4.0/6.0

Extracurricular Activities

2019–2020 **IEEE Bilkent Student Branch Vice Chair**

Administrating and supervising technical activities, lectures, conferences and competitions.

2018–2019 **IEEE Bilkent Student Branch Robotics and Automation Society (RAS) Coordinator**

Administrating, introducing fundamentals of electronics and Arduino microcontroller programming with C to preparatory and freshmen year students, organizing engineering conferences.

02 May 2023
Aachen, Germany
